

BATTERYPROMO

COMMERCIAL TRUCK BATTERIES

IT'S NOT JUST
ABOUT RUNNING
YOUR TRUCK.

POWERED BY

FEATURES & BENEFITS

- Vibration resistant construction
- Heavy-duty cycle life
- Heavy-duty commercial grids
- Copious cold cranking amps and reserve capacity ratings for dependable engine starting and longer runtimes
- MIXTECH technology eliminates acid stratification, the #1 cause of premature capacity loss battery failure *

Our lineup of heavy-duty commercial batteries is designed for extreme performance. Whether you're starting a bus, using an excavator or hauling cross-country, our batteries exceed the toughest industry standards for starting power, deep-cycle capacity and charge recovery in Canada's harshest environments.

**THE MOST
SIGNIFICANT
IMPROVEMENT
IN A BATTERY IN
50 YEARS.**

Commercial truck batteries haven't changed in 50 years.

Advances in technology changed what a commercial truck battery needed to handle. Starters have become smaller and more efficient, but more and more systems have electrical components creating parasitic draws on a battery. With this change batteries require less cranking amps and a higher capacity to support all the new electrical components in a commercial truck.

Placing an outdated 50 year old technology in modern trucks will not only limit what electronics can be used, but also wear down the battery and reduce its life cycle.

Mixtech batteries are designed to deal with the high capacity draws of modern electronics, have high cycle life and reduce the damage done from acid stratification.
